

Serial No. 09/931,037

Reply to Office Action of March 18, 2005

**Amendments to the Specification:**

Please replace para. [0016] with the following amended paragraph:

[0016] In operation, the profile module 212 generates an upgrade profile based upon user input. The upgrade profile is then sent to the delimited text extractor 214. The delimited text extractor 214 extracts from the profile the type of module to be upgraded, the nature of the upgrade, the location of the module for upgrade, the location of the upgrade, the name and properties of the business object to be invoked to carry out the upgrade and the operation to be performed. This information is transmitted as a text or import file to the import/export utility module [[210]] 130, as shown in Fig. 1.
